Utilisation des serveurs Galaxy publics

- créer un compte pour le transfert de fichiers et les notifications
- vérifier disponibilité des données partagées ("data only...")
- temps de calcul variable (queue, batch job intercurrents, événements), sensibilité aux paramètres par défaut, disponibilité des utilitaires

Peace to Ukraine!

The list of laboratories that can host Ukrainian scientists can be found here. Galaxy Project has a number of positions at its EU and US sites. Contact us at galaxyproject@galaxyproject.org | Дізнайтеся про можливість роботи українських вчених у галузі біоінформатики на українських серверах. Знайдіть нових українців у галузі біоінформатики на серверах проекту. Контактуйте нас за адресою ukraine@galaxyproject.org

GCC2023 is a wrap!

Thank you to all the authors, presenters, and sponsors.

91 in-person participants
49 virtual participants
21 countries represented
many koalas hugged

316 authors
48 talks
49 posters
14 training workshops

See you next year in Brno!

"Anyone, anywhere in the world should have free, unhindered access to not just my research, but to the research of every great and engaging mind across the spectrum of human understanding" – Prof. Stephen Hawking

Unnamed history

This history is empty. You can load your own data or Charger des données depuis une source externe.

Gestion des données partagées

The screenshot displays the Galaxy Europe web interface. The top navigation bar includes the Galaxy logo, the text "Europe", and a "Workflow" button. Below the navigation bar, a left sidebar contains a "Tools" section with a search bar and a list of tool categories: "GENERAL TEXT TOOLS", "GENOMIC FILE MANIPULATION", "COMMON GENOMICS TOOLS", and "GENOMICS ANALYSIS". The main content area features a "Project Highlight" for the "Vertebrate Genomes Project" (VGP), which is a project of the "10K Consortium". The highlight includes a blue banner with the text "Project Highlight. The Vertebrate Genomes Project" and a logo for the VGP. Below the logo, it states "Generating near error-free genome assemblies for more than 70,000 vertebrate species!". A quote from Prof. Stephen Hawking is displayed: "Anyone, anywhere in the world should have free, unbridled access to not just my research, but to the research of every great and enquiring mind across the spectrum of human understanding." Below the quote, there are sections for "News" and "Events". The "News" section mentions "Connecting Astronomical Data Archives with Galaxy". The "Events" section mentions "Oct 4 - Oct 6 European Galaxy Days (EGD)". On the right side of the interface, there is a "History" panel showing a list of recent workflows and datasets, including "PhyML, Subout: MAFFT on data 33", "PhyML, Statistics: MAFFT on data 33", "PhyML, Newick tree: MAFFT on data 33", "RAxML on data 41", "MAFFT on data 33", "10-THREE on data 34: Report and Plot Tree", "10-THREE on data 34: Occurrence Frequencies in Bootstrap Trees", "10-THREE on data 34: Multi-Link Distance Matrix", "10-THREE on data 34: Multi-Link Distance Tree", "10-THREE on data 34: BIONJ Tree", "MAFFT on data 33", and "3D barcodes_m.fasta".

Gestion des historiques

The screenshot shows the Galaxy web interface with a 'Switch to history' dialog box open. The dialog box has a search filter and a list of history items. The first item is 'Unnamed history (Current)' with a size of 45 items and a date of 6 days ago. The second item is 'data only 2023-2024 w/p' with a size of 52 items and a date of 6 days ago. Below the list, it says '- All 2 histories loaded -'. At the bottom of the dialog box, it says 'Click a history to switch to it'.

The background interface shows the Galaxy logo, a search bar, and a list of tools on the left. The main content area displays a banner for the Vertebrate Genomes Project (VGP) with the text 'Generating near error-free genome assemblies for more than 70,000 vertebrate species!'. Below the banner, there is a quote: 'Anyone, anywhere in the world should have free, unbridled access to not just my research, but to the research of every great and enquiring mind across the spectrum of human understanding.' - Prof. Stephen Hawking. At the bottom, there are sections for 'News' and 'Events'.

Techniques bioinformatiques

Podospira anserina

- génome 36 Mb (Fasta)
- données de séquençage 2 x 500-800 Mb (Fastq)
- 10k gènes annotés
- assemblage nouvelles souches : entre 4 et 8h (12 coeurs 3.5 GHz)
- phylogénie ITS seuls : 4h (phymI)
- phylogénie codes barres : 12 à 15h (phymI)

- serveur de calcul avec beaucoup de RAM (assemblage) et GPU (phylogénie)
- écriture de scripts shell et Python (ou R) pour les prétraitements et le développement de "workflow"
- serveur de stockage : 400 génomes ADN (+ 96 protéines) = 24 Go (en 2022)
- scripts de recherche/blast automatique (NCBI, JGI, etc.)

Algorithmes bioinformatiques

Assemblage de génome *de novo*

Steps for genome assembly:

- Align reads to find **overlapping regions**
- Determine a consensus sequence (or **contig**)
- **Scaffold** contigs based on read pairs and/or overlapping regions
- **Generate pseudo-molecules** based on genetic maps

- Données : short et/ou long reads (FASTQ)
- The present and future of *de novo* whole-genome assembly

Alignement sur un génome de référence (mapping)

- Données : short reads (FASTQ), génome de référence (FASTA)
- Mapping Reads on a Genomic Sequence: An Algorithmic Overview and a Practical Comparative Analysis

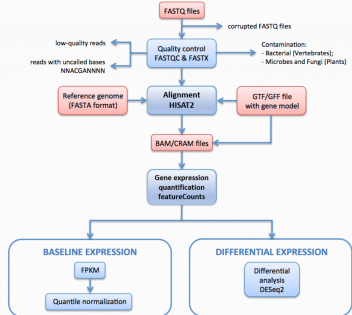

Détection de mutation (variant calling)

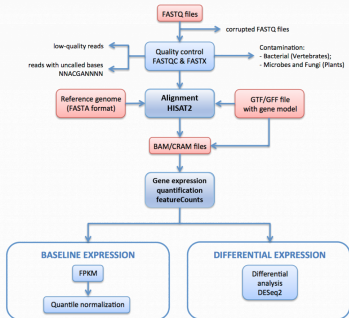

- Données : reads (FASTQ),
génomme de référence (FASTA)
- Fichier VCF comprenant les
positions identifiées et les
nucléotides associés (% et
probabilité)
- Haute sensibilité aux
paramètres de filtrage (cf.
tutoriel Galaxy dans le cas
des champignons)

RNA-Seq : mapping & quantification

- Données : reads (FASTQ),
génomme de référence (FASTA)
- RPKM (reads per kilobase of
exon model per million
reads), FPKM (fragments per
kilobase of exon model per
million reads mapped) : prise
en compte de la longueur des
gènes et de la taille de la
bibliothèque

RNA-Seq : analyse différentielle

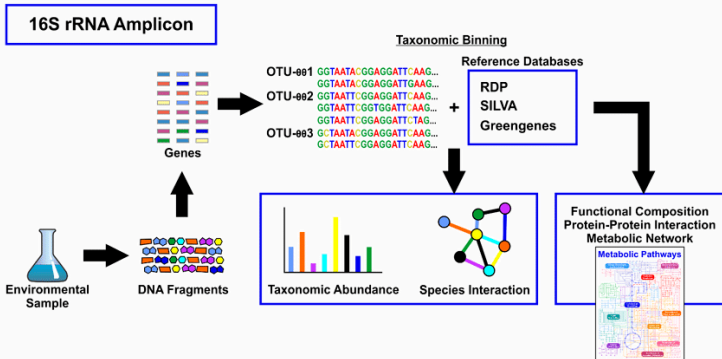

- Données : RPKM ou FPKM
- Approche fréquentiste ou bayésienne pour décider si les données de comptage moyennées sur les réplicats techniques et normalisées pour chaque réplicat biologique sont dûes au hasard ou non (gène sur- ou sous-exprimé par analyse de contraste sur condition de référence).

RNA-Seq : analyse d'enrichissement

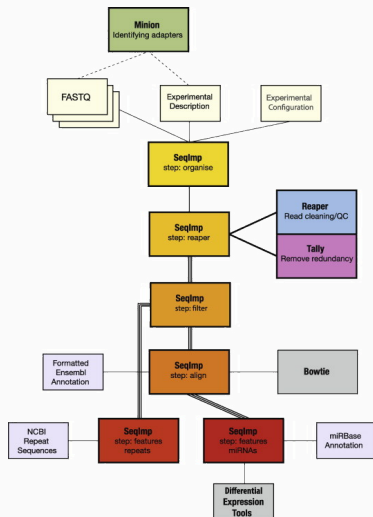

- Données : tableau de quantification, annotation (go-terms, interpro)
- Approche par classification (3 classes/ontologies pour les go-terms : cellular component, biological process or molecular function) et "pathway"/"network" analysis (processus biologiques ou fonction moléculaire, et événements régulatoires)

Métagénomique : Principe général

- Utilisation de base de données pré-définies, que l'on peut augmenter avec des souches de référence
- Mise en oeuvre rapide et rapport importable dans les suites d'analyses statistiques
